ESPIA of October 22, 1968 Irreproachable Orthodoxy

In answer to what we reported three days ago, about the unacceptable and most quantismust questionable manner, according to which some Technical Companies endeavor to undertake construction of large investment projects, under the excuse that they are going to borrow foreign capital for this purpose, and for which, however, they ask the Greek Government's guarantee, we received a very long explanatory letter from the Under-Secretary of Coordination, Mr. Evlambios. At first the Under-Secretary the mks Estia for its "fruitful" interest about dealing with public affeirs and "absolutely agrees that the way of financing, as commented by Estis, is not the most ideal, not even objective (the ministernal) document mentioned originally the word "faultlese") way of dealing by the State. For this reason we already work intensively for the preparation of specifications and tenders, and in the very near future tenders will be calling for financing for all public works for which there are ready fessibility studies". However, in continuation, the Under-Secretary mentions the disadventages of intergovernmental agreements for financing, in particular the obligation of obtaining supplies from certain countries and that these cover only 20-30% of the project to be financed, while at the same time a clause is provided which precludes the covering of the belance of the cost from other lending sources; under such circulatances, the balance of cost should be govered by the budget in drachame. (But why not? Let the balance of the cost be firm meed through the Budget and correspondibely reduced the purposeless socialist concessions).

Under such terms, however, the ministerial document begins to justify the medium torm financing through the circulating free capital all over the world, which Ratia mentioneds

"And it is true - he says - these are usually oversharped with additional charges. But on the other hand, such leasn are ofersharpens, as they usually are not connect with the procurement of medicary and supplies from one country only, they may be used for financing of the total cost (or, at least 70%) of each project and, finally, the procedure to secure such loans is very expeditions. Of course, statistically, there is no doubt that you are right and that the method on which you are commenting is not advantageous. I repeat, that we are getting organized for returning to the irrepresentable hidding method. But on dynamic countderstion the picture is changed and what is considered disadvantageous is changed to advantageous is changed to advantageous for the totality when there exist some people who can assume total political responsibility of acts, which are decided upon only after methodous graduitation of final result.

Going around the very eroused resineragis of Athens and the insuling stores of Hermes shows, if you bring back to memory how empty and remoted everything was only a year ago, you will sirely admit, that the monances taken even though - or rather because they were - unorthodou, turned out to be a success of the seconds policy. The country has been led for from the mixels of a terrible singuistics; and very soon we will bring it bank to an irresponsibility orthodoxy, which we adopt as angerty any yourself.

Tot all these are far from convincing and lineause fight, if the pront the Alpain restaurants and the steres of Heymes afrest had greating sixtivity, that is because last year the war of Arche and farciall cut should tourist traffic in the Mediterraneau, while the year plantam has been restored. As for the others, it is impossible to five in the architectual what hind of political responsibility, the Under-Secretary undertakes holding hock from the "Irrepresentable orthodory" states in the Architectual to the Architectual to the Constitution in in effect, thanks to be God - yet, are Article 14 of the Constitution in in effect, Thireflow, more than every before the irrepresentable orthodory is meaninger on much more when in no very it prevents the sauching of contracts for projects the property of the Constitution of the Constitution for the Architectual that the Separate by hidding with definite time Hintu and the government's attacement that the Separate hidder will have the government of parameters for the foreign-suptial with which he to to finance - in fail or in part - the project microline.

We do not see what is harmful in such a procedure. On the contrary, the political morality of the country is shaken when one case, depending on his judgment, disregard the "irreproceduals sethodoxys" and adopts the repronehnshie conditions. We are sure that the Prime billister too will agree on this with us and not with the hereitos,
